

GreenBite Project Overview

GreenBite is an innovative food tech startup dedicated to reducing food waste and promoting sustainability in the food industry. Founded with the mission to create a more responsible and conscious food consumption culture, GreenBite connects consumers with surplus meals from local restaurants, cafes, and food vendors. This not only helps reduce the environmental impact of food waste but also allows customers to enjoy delicious meals at discounted prices. By leveraging mobile technology and geolocation services, GreenBite empowers users to discover surplus food items available nearby, place orders, and contribute to a greener planet with every bite. The GreenBite team consists of passionate developers, designers, and sustainability advocates working together to create a seamless user experience and ensure the platform delivers on its promise of convenience, affordability, and impact.

Project Description The GreenBite mobile application is a cross-platform app developed using Flutter, aimed at connecting users with surplus meals from food vendors in their vicinity. It features real-time geolocation, intuitive navigation, an engaging onboarding experience, personalized recommendations, user profiles, and an integrated Stripe-based checkout system. Users can browse a variety of food items, filter by dietary preferences, manage their cart, mark favorites, and track their orders. The app also supports a vendor view, allowing restaurants and food shops to list available surplus items and manage inventory. The project includes a backend powered by a RESTful API with secure user authentication and CRUD operations. It emphasizes scalability, security, and maintainability, with future plans for AI-driven recommendations and loyalty points via Green Bite Points integration. GreenBite aims to create a meaningful social impact by encouraging users to make more sustainable choices while enjoying cost-effective and high-quality food options.
